

Description

Stem extensions are commonly supplied to:

- extend the lever operator out through valve/pipeline insulation which could interfere with the standard construction.
- to extend the operator to a more convenient place for use when the valve is in a difficult to reach location.

Features

Standard valves can be easily adapted / modified.

Options

Materials.
Stem extension length to suit customer requirement.

Materials

Typically the stem extensions are manufactured from stainless steel, but can be manufactured in a full range of materials to suit the application.

Specifications

Customization and compliance to customer / project requirements.
